

Premium Security

On top of AimBetter's [secure-by-design architecture](#), we offer additional security conditions for organizations with **stringent compliance requirements**, such as **financial institutions, government agencies, and healthcare organizations**, that demand further separation from the general environment.

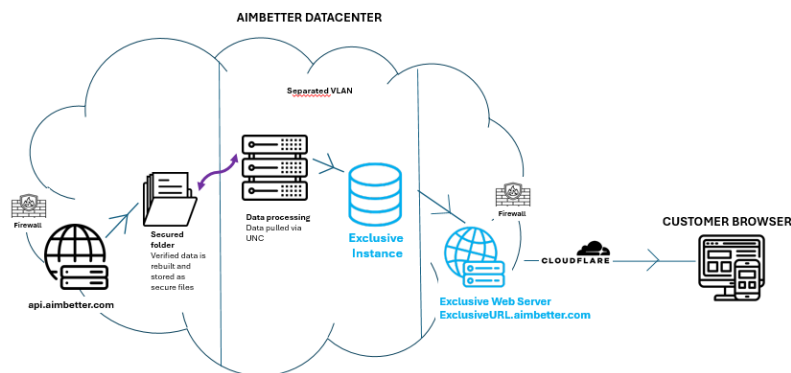

Premium 1

- **Exclusive database** for storing performance data and analytics, fully secured.
- **Exclusive URL** for web application with exclusive service user for accessing the Database

Premium 2

- **Exclusive separate database instance** and **dedicated web server**, accessible only by the company's users.
- **Additional security enforcement** tailored to the company's specific requirements.

These premium security conditions **incur additional infrastructure and maintenance costs** and require an **on-demand quotation** based on the customer's specific needs.
